Sequence 38, Application US/10439703

Publication No. US20040018527A1

GENERAL INFORMATION

APPLICANT: Changy Jenny

APPLICANT: Changy Jenny

APPLICANT: Changy Jenny

TITLE OF INVENTION Differential Patterns of Gene Expression that Predict for Docetax

ITILE OF INVENTION: Chemosensitivy and Chemoresistance

ITILE OF INVENTION DIfferential Patterns of Gene Expression that Predict for Docetax

ITILE OF INVENTION DIFFERENCE: WS/10/439,703

CURRENT APPLICATION NUMBER: US/01/4139,703

CURRENT PILING DATE: 2002-05-17

NUMBER OF SEQ ID NOS: 91

SEQ ID NO 38

LENGTH: 2167

TYPE: DNA

ORGANISM: Human

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Total RNA was prepared from apex tissue extracted from plants with no cold treatment; and from plants with 2-week, 4-week and 6-week cold treatment separately. Equal amount of total RNA was pooled from all four samples, cDNA library was made using pooled polyA RNA and cDNA clones were in vivo excised at the University of California, Davis (V. Echenique, B. Stamova, J. Dubcovsky). Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further details.

Hydrakuous (Inchmail)"

Floate="Wector: lambdaZAP; Site 1: EcoR1; Site 2: Xhol; Plants were raised from seeds In a Controlled Environments growth chamber maintained in continuous light at 180C, and tests and pericarp were dissected from developing kernels at Washington State University, Pullman, MA (Kannangara, von Metstein). Total RNA was prepared, poly(A) RNA was purified, one cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids in the TJ Close lab at the University of California, Riverside (Akhunov, Chin, Choi, Close, Fenton, Kianian, Otto, Somons, Zhang). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Regum, Palmer, Frisch, Akkins and Ming). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates , Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis see close TJ, Wing R, Kleinhofs A, Wise R (2001) Genetically and physically anchored BST resources for barley Genetics Barley Genetics Newsletter 31:29-30. This sequence is of BAC T12M4 from Arabidopsis thaliana chromosome
This sequence does not represent the sequence of the entire
insert of this clone. It is shorter by 11040 bp because we submit
only the unique sequence of the clone. However, in order to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Arabidopsis thaliana (thale cress)

S.t., Albany, CA 94710, USA.
On Jun 23, 1998 this sequence version replaced gi:2804593.
The sequence of BAC 712M4 from Arabidopsis thaliana chromosome 1.
facilitate the joining of overlapping clones in the future for creation of larger contigs, we provide a small overlap (200 bp) between overlapping submitted clones. The 3' end of this sequence overlaps by 200 bp the 5' end of the sequence of the BAC F7G19.

                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

FEATURES

```
Genes were identified by a combination of several methods: Gene prediction programs including Genscar+ (Chris Burge, http://CCR-081.mit.edu/GENSCAN.html), Genemarkhmm (Mark Borodovsky, http://GCR-081.mit.edu/GENSCAN.html), Genemarkhmmerk (a variant of Glimmerk, see Minabla Pertea, http://www.tigr.org/softlab/glimmerm.htm/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mperteadrigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins en named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without proteins over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.washington edu/RM/Repeatmasker (Arian Smit, http://ftp.genome.washington edu/RM/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   . >8780))

                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                 180
                                             This invention describes a novel protein (I) with splice-factor activity in plants (I) modifies the choice of splice sites in many plant pre-mRNAs. (I) (also the nucleic acid that encodes them and related vectors or expression systems) are used: (i) to alter splice patterns in plants; or their parts; (ii) to alter developmental behavior of plants; and/or (iii) to delay flowering, particularly by at least 25% relative to the wild type, especially in crop plants such as cereals, beans, rice
                                                                                                                                                                                      09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (b) detecting a profile of expressed polynuclectides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CGAACAGTGGAAGATGATTGATAACGGAAATATCGGAACATCACTCCAACAAAAAT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                267

                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                  ઠે
                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to Arabidopsis thaliana nucleic acid sequences. The DNA sequences and the polypeptides they encode are useful for identifying homologous or related genes, for producing compositions that modulate the repression or function of the polypeptides, for mapping functional the regions of the protein, in diagnosis, for studying associated functional regions of the protein, in diagnosis, for studying associated functional regions of the protein, a genetic manipulation of cells, preferably plant cells, in screening assays of various plant strains to determine the strains that are capable of withstanding a particular disease or conviconmental stress, for enhancing or inhibiting production of biosynthetic products in plants and to create genetically modified and transgenic organisms, such as plant cells and plants. Transgenic plants are useful for introducing or improving disease resistance and stress tolerance in plants, screening biologically active agents, such as fungicides and insecticides, and for elucidating biochemical pathways. Sequences ABX56649-ABX57647 represent Arabidopsis thaliana

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising:

(a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome, and

(b) detecting a profile of expressed polynucleotides in the plant characteristic of a stress response. The method is useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2212 ATGATICTAAAAGCTATAGAAGCAGGAGTCGGAGCCGTGGTCCAAGCTGTAGCTA

production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the Buropean Patent Office.

of Arabidopsis thaliana. A genomic library of A. thaliana ecotype C RDL was screened with a BglI fragment of the rice anther-specific cDNA clone RTS-1. A genomic fragment was isolated and identified as containing sequences homologous to the human splice factor ASF/SF2 and the Arabidopsis SRI gene, and was designated ASR-2. The ASR-2 gene was found to be expressed in all plant parts investigated. The genomic fragment also included ORR3 on the opposite strand relative to ASR-2. A 530 bp region located between the 2 genes was shown to function as a dual promoter. The claimed promoter (see AAV69913) is in the orientation that naturally expresses the ORR3 gene. It is capable of driving strong expression of linked exogenous genes. The claimed promoter can be incorporated into expression vectors to drive high level protein expression in transgenic plants. The exogenous gene may encode or which act as growth regulators, or which encode pharmaceutical or bolymer components. The promoter is equally, or more, effective than the 35S cauliflower mosaic virus promoter.

 The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced.

The recombinant viruses generated are capable of expressing apoptosis-
associated genes. These can then be used in a variety of diseases for which the induction of apoptosis, is therapeutic. The recombinant viruses inhibition of harmful apoptosis, is therapeutic. The recombinant viruses to minibition of harmful apoptosis, is therapeutic. The recombinant viruses therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have concountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of the cells producing the virus will be destroyed because the period of the required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated coptosis resistant gene introduced) is established and overcomes the problem. The present sequence represents the base sequence of the problem. The present sequence represents the base sequence of the problem. The present sequence represent invention.

The recombinant viruses generated are capable of expressing apoptosis.

The recombinant viruses generated are capable of expressing apoptosis. The recombinant viruses generated are capable of expressing apoptosis. The recombinant viruses generated are capable of expressing apoptosis. The recombinant viruses which the induction of apoptosis, is therapeutic. The recombinant viruses inhibition of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selection, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have concountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that required to induce cell death by apoptosis is shorter than that required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated apoptosis resistant gene introduced) is established and overcomes the problem. The present sequence represents the base sequence of the contains the human BCl-xl gene, and invention describes an apoptosis-resistant virus-sensitive used in an example from the present invention New apoptosis-resistant virus-sensitive cell 51pp; English. An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998). cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninch et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index\_e.html) for further details.  Strizhov, N., Rosso, M., Li, Y. and Weisshaar, B.

Strizhov, N., Rosso, M., Li, Y. and Weisshaar, B.

Direct Submission

Submitted (121-0CT-2002) Weisshaar B., Max-Planck-Institut fuer

Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany

This sequence is recovered from the left border of the T-DNA. It
indicates an insertion close to or within gene At1g09140. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German

Plant Genomics program designated 'GABI'. Information on line

availability can be found at:
 http://www.mpiz-kceln.mpg.de/GABI-Kat/.
